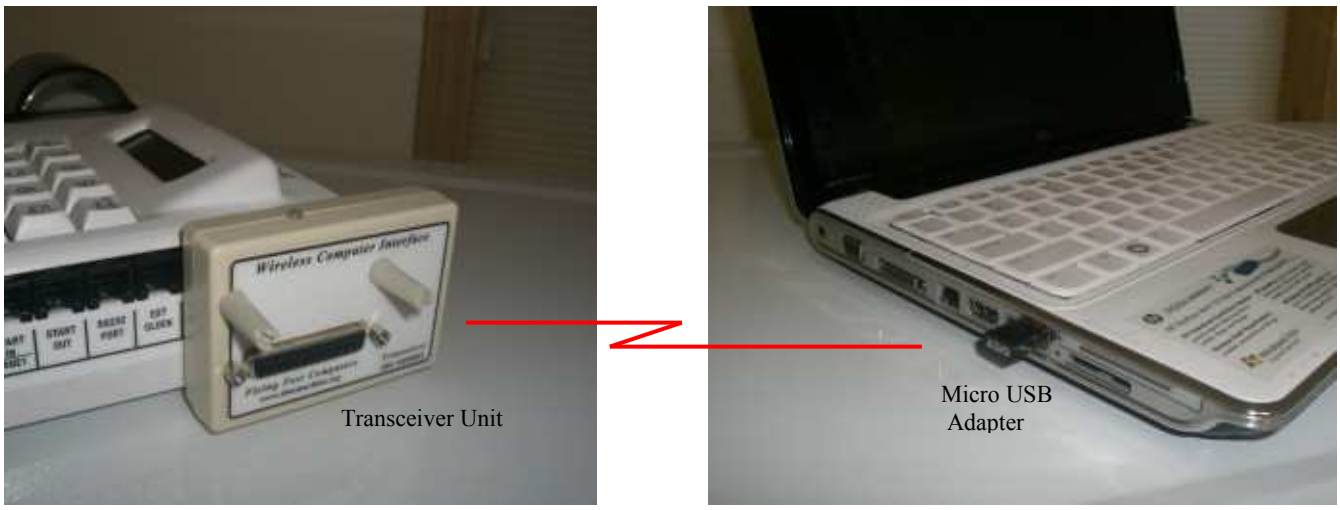
New! For Your Time Machine Sports Timing System

Introducing The

Wireless Computer Interface



- Plug-and-Play replacement of the standard computer interface cable.
  - Transceiver unit plugs into Time Machine's Multilane port.
  - Micro USB adapter connects directly to computer's USB port.
- Wireless connectivity up to 400 ft depending on obstacles.
- Compatible with all existing scoring software – emulates a standard serial port.
- Can wirelessly connect up to 7 Transceivers to a single USB port, allowing simultaneous reception of data from up to 7 Time Machines with a single computer.
- Can view assigned COM ports and rename Transceiver icons to easily manage multiple Time Machine connections.
- Provides large data buffer with error detection and correction for a robust data link.
- Provides secure connection with unique ID code prohibiting unauthorized access to your data.
- Status LED blinks red when not connected, turns green when connection is established and turns orange when data is being transmitted to/from the Time Machine.
- Output connector extends Multilane port signals from Time Machine for normal use.
